

# UV-C Detection Tag

No need to doubt whether UV sterilization is effectively activated.  
You can check the situation of UV with this simple tag.  
This tag will come with every single bay of the locker.

## UV-C Deactivate

## UV-C Activate

# UV-C Sterilizer

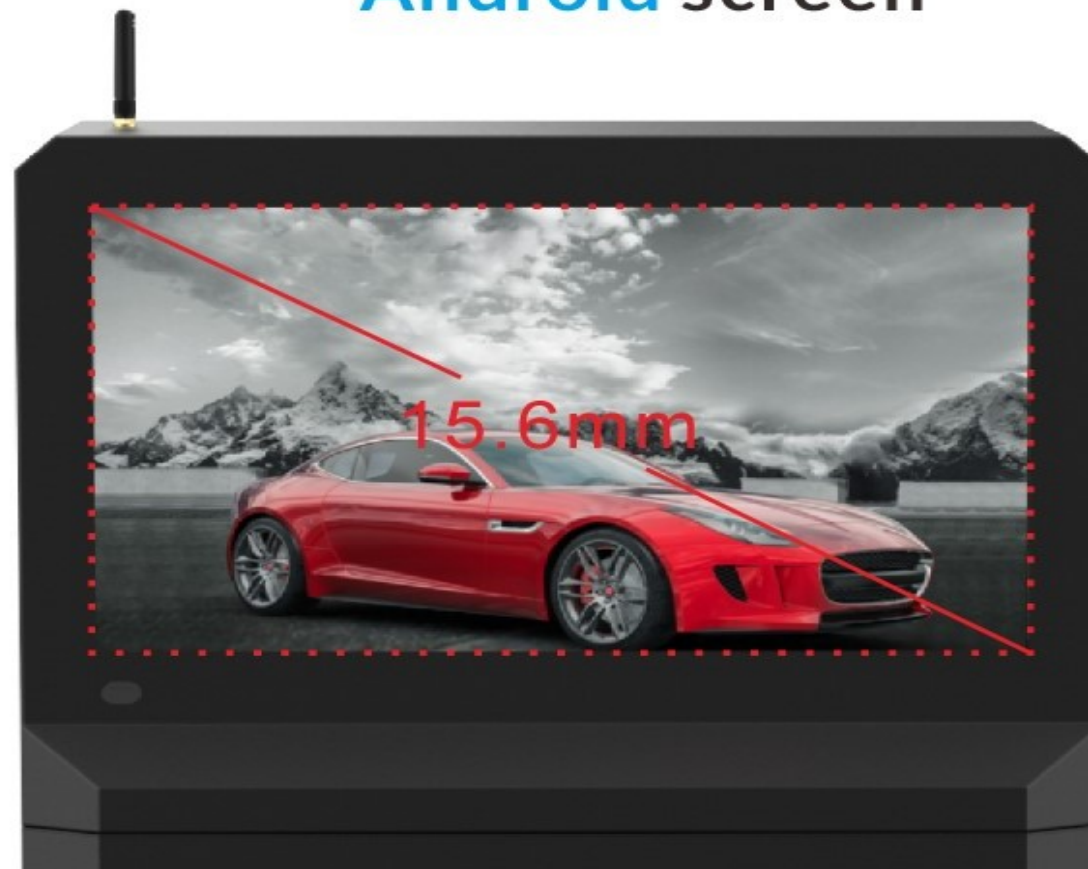

Ultraviolet rays are divided into three categories according to their wavelengths. The shorter the wavelength, the higher the intensity. Among them, UVC has the highest intensity. Observatory data shows that the UVC wavelength is 100 to 280 nanometers, and high-energy ultraviolet light can destroy the deoxyribonucleic acid (DNA) of bacteria and microorganisms, so UV-C is mostly used for sterilization.

UV-C Sterilizer is totally safe for electronics while kills 99.99% germs. Sterilise will automatically start when the door is close, the process will take 5 minutes to protect your phone in case of over sterilising.

## Safe and Powerful

**Multi-language**  
8 languages available: English, Chinese, Portuguese, French, Russian, German, Arabic, Spanish.

**One system, fit for different locker demand**  
System support 6, 8 and 16 of lockers station.

**Coin acceptor mode selectable.**  
Compatible with accepting coin or free mode.

**Alert selection.**  
You can turn alert on, or mute to fit your application.

**Door closing sensor**  
When a certain period door is not closed, a splash screen and an alarm prompt alert.

**Disclaimer**  
Disclaimer prompt page, to prevent misunderstanding of responsible.

**Usage counter**  
The system will count the number of users, and duration. This will help for better planning of locker management. (System cannot store any personal information)

**Different type of fee mode.**  
6 Different charging fee modes for your best fit. User overcharge/timeout reclaim mode.

**Different payment method available**  
Support coins and credit card payment.

**Multi-coin learning system**  
The coin system recognizes 3-type of the coin. Convenience to setup charges and management.
